### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in Publication No. US 2005/0058550 A1 to Becker et al. The improvement comprises the end of the impeller sleeve shaft being sloped from a first point on the impeller sleeve shaft end to a second impeller sleeve shaft end, the second point being axially spaced relative to the first point; the side surface of the internal flat being engageable with the sloped end of the impeller sleeve shaft, whereby the internal flat moves relative to the impeller sleeve shaft toward engagement with the external flat as the impeller sleeve shaft enters the central opening of the pump drive member, whereby a driving connection is established between the impeller and the pump when the internal and external flats are in registry for the purposes of mitigating an out of registry condition between the internal and external flats.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The publication to Becker et al. is cited for the showing of a torque converter assembly similar to applicant's but lacking the sloped end of the impeller sleeve shaft.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of five patents.

Art Unit: 3745

Johnson, Schmidt et al., Dick, Kobayashi, and Akiyama are cited to show gear pump assemblies in torque converters.
